

How to Install a Mini-Pollinator Garden

Three-Session Workshop, Aug 12- Aug 26 - Sept 23

Langlois Public Library

presented by Darcy Grahek, Stillwater Natives Nursery, Bandon

Bandon Marsh offices Pollinator Garden, 2020 and 2021

A successful pollinator garden will provide huge benefits to local pollinator species and also provide great enjoyment for people watching these wildlife in action. This three-session workshop will walk participants through every step to establish a drought tolerant garden that includes native flowering plants. Creating a mini-pollinator garden at the library will give participants an outdoor and hands-on experience and a chance to see a garden plan unfold.

First session is August 12 from 5:30-7:00 pm

Participants choose a site at home and create a plan addressing these components: *A) Sun B) Soil C) Water D) Challenges*

Pollinator Garden site design is 80-100 sq ft in any shape. Repeat design as needed. Learn how to use a "Pollinator Kit" for appropriate conditions.

RESERVE YOUR SPACE in the workshop -Email the Langlois Library
